DECOMP Septic

DECOMP Septic Bioculture is specially formulated blend of facultative bacteria, enzymes and other microbes that are introduced into septic tanks to aid in the biological breakdown of organic waste. DECOMP Septic bioculture promotes the natural decomposition process ensuring efficient waste treatment, odour reduction and prolonged life of septic tanks by effectively digesting solids, fats, oils and grease. Regular application i.e. monthly or quarterly is recommended to replenish microbial populations especially after the use of antibacterial soaps, detergents or chemicals that may reduce microbial activity.

Benefits

- Enhances the breakdown of organic matter, reducing sludge buildup in septic tanks.
- Reduces the risk of septic tank overflows by accelerating the decomposition process.
- Controls unpleasant smells from septic tanks.
- Reduces wear and tear on the system by maintaining its efficiency.
- Decreases the frequency of septic tank pumping and other expensive repairs.
- Safe for use with all types of pipes and septic tank components.

Application Area

- Residential Septic Tanks.
- Industrial Septic Tanks.
- Restaurants and Hotels.
- Educational Institutions.
- Portable Toilets.
- Sludge Holding Tanks.
