Caring for the Environment

(ISO 9001:2015 Certified Company)

DECOMP Sugar

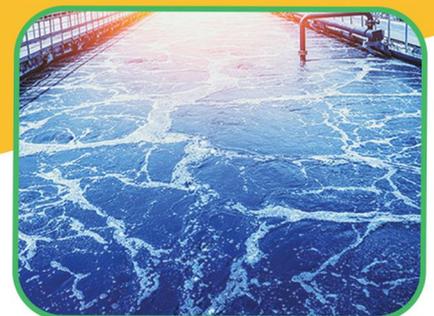

DECOMP Sugar is a specially formulated bioculture for treating effluents generated by sugar processing plants. It is specifically engineered to break down the high and complex organic loads generated by sugar mills, distilleries and other sugar-based industries. DECOMP Sugar enhances the reduction of BOD & COD levels, controls odor and ensures compliance with environmental regulations making it a cost effective and sustainable solution for sugar effluent management.

Benefits

- Reduces high BOD/COD levels.
- Stable MLSS/MLVSS generation.
- Resistance to shock loads.
- Reduces commissioning time.
- Minimizes operational and maintenance costs.
- Easy to store, handle & transport.

Application Area

- Condensate Polishing Unit (CPU)
- Mixed Bed Biofilm Reactor (MBBR)
- Membrane Bio Reactor (MBR)
- Sequential Batch Reactor (SBR)
- Activated Sludge Process (ASP)
- Extended Aeration Systems
